33. My ideal job would be one where I could:

- Do something I'm good at with lax deadlines
- Make games
- Program
- Develop things that get pushed to end users so users can see and give feedback on my design and create games.
- work with visual effects
- code websites, assist users (helpdesk),
- be a general programmer
- Program
- Make stuff that's fun and fun to make.
- Work for myself
- Develop code for an application that is constantly evolving and improving.
- Product Designer!
- Express my creativity and productivity through programming.
- Get paid to play with new technology gadgets.
- Make design and implementation decisions without being mired in beauracracy
- No Idea
- take existing software and try to break it. To find new uses for existing software.
- invent
- implement software according to specific business practices
- work on programing video games
- Build applications and software products
- design, draw, anything related to graphic designs.
- Not quite sure yet. I like to be my own boss someday--somewhere in the tech industry
- be in charge of all major design decisions in the development of computer games.
- Create websites (front-end only).
- decide what i can do and how to do it
- Perform user research and conduct surveys to provide elegant UI/UX.
- Develop for healthcare, pharmaceutical, or medical industry.
- be challenged, but not pressured to where I stress out, to code.
- Enjoy what i do everyday
- develop in C++ and also become a project manager
- create useful apps
- build products that make people's lives better
- be a product manager
- a job where I have a lot of freedom in my work. I want to combine education and technology
- enjoy the work and have fun.
- Develop software on a large scale.
- build scalable applications that can meet global demand
- Spend time both designing products and developing code as part of a team.
- Implement knowledge learned from school. Specifically, become a User Experience Designer
- Programming cloud platforms
- Am making a difference by doing challenging work, while also receiving competitive pay.
- code web applications.
- keep having new project to work on and not stay on repetitive tasks everyday
- exercise my knowledge in HCI to be a reputable UX designer, whose work can be seen across
- Work in a group project for some app but nothing too stressful
- Design and be creative, whether it is technology related or not (e.g. concept art, web design,
- I am not sure yet
- Create something with my own ideas. (Some, doesn't have to be all by me)
- develop outside the box technologies
- be supported by my colleagues as I manifest my ideas into reality and help my colleagues w
- Developer
- know everyone in the company/workplace
- Make a few products and be wealthy
- design and make user interfaces or games
- develop web applications
- make enough money to survive and still be happy
- Program. I just like to program. I love C++ and Java.
- Create programs that will facilitate the usage of higher technology
- learn graphics and develop websites!
- Design games!
- Make web applications
- Develop Software
- Contribute to my country, my society, my family. I don't want to work with software forever
- Do less work
- pick my own times and project
- Work with the people who make me feel like part of a big family
