Two columns with two nested columns

Per the documentation, nesting is easy—just put a row of columns within an existing column. This gives you two columns **starting at desktops and scaling to large desktops**, with another two (equal widths) within the larger column.

At mobile device sizes, tablets and down, these columns and their nested columns will stack.

```
<div class="container">  
  <div class="row">  
    <div class="col-md-8">.col-md-8  
      <div class="row">  
        <div class="col-md-6">.col-md-6</div>  
        <div class="col-md-6">.col-md-6</div>  
      </div>  
    </div>  
    <div class="col-md-4">.col-md-4</div>  
  </div>  
</div>
```
