Winter 2023 Lecture 1:

Finding a Celebrity (continued)

² What is a celebrity?

- ▶ Within a group of people G
We say a person p is a celebrity (famous) iff:
 - ▶ Everyone knows who p is
(celebrities must be known by everyone)
 - ▶ Person p does not know who anyone else is
- ▶ Person p might be a celebrity within G
 - ▶ How can you check?
 - ▶ What actions can we take?

3 Who is a Celebrity?

$$|G| = n$$

- ▶ Checking if person p is a celebrity:

```
for each person  $x$  in  $G - \{p\}$ 
  if  $p$  knows  $x$ 
    return false
  if  $x$  does not know  $p$ 
    return false
return true
```

$n-1$ people: $2n-2$ questions

▷ Is there a celebrity in group? $2n^2 - 2n$

```
for each  $p \in G$ 
  check if  $p$  is celebrity
```

4

Finding a Celebrity

- ▶ The previous solution was “brute force”
- ▶ Can we do better?
- ▶ Things to look for:
 - ▶ Did we repeat work?
(Work that was needed, but was done twice)
 - ▶ Did we do unnecessary work?
(work that we could have done without)

5 Finding a Celebrity

Given group G , is there a celebrity? If so, who?

$G' = \text{copy of } G$
while $|G'| > 1$
select a, b distinct and arbitrary from G'
if a knows b remove a from G'
else remove b from G'

$\left. \begin{array}{l} \text{if } a \text{ knows } b \\ \text{remove } a \text{ from } G' \\ \text{else remove } b \text{ from } G' \end{array} \right\} n-1 \text{ questions}$
 $\left. \begin{array}{l} \text{if } a \text{ knows } b \\ \text{remove } a \text{ from } G' \\ \text{else remove } b \text{ from } G' \end{array} \right\} \text{Total}$

$P \leftarrow$ only one left in G'
check if P is celebrity } $2n-2$ qs

6 Finding a Celebrity

- ▶ Previous solution assumes at most one celebrity
- ▶ Would a group have two or more?

Suppose FSoC a group could

let a, b be two distinct celebs

does a know b ?

If yes: a not celeb $\rightarrow \leftarrow$

If no: b not celeb $\rightarrow \leftarrow$
